

How to Make Wood Drawers Slide Easier

Tools & Materials Required:

- Clean cloth or rag
- Petroleum jelly
- Small container
- Paper towels for cleanup
- Flat working surface

Step-by-Step Process:

1. Prepare your workspace:
 - Clear the area around furniture
 - Take out the drawer fully
 - Place drawer on flat surface
2. Check drawer condition:
 - Look at wooden tracks
 - Clean off any dirt
 - Note rough spots
 - Remove loose debris
3. Apply petroleum jelly:
 - Put jelly on your finger
 - Spread along drawer tracks
 - Cover both sides evenly
 - Focus on front edges
 - Add extra where needed
4. Final steps:
 - Put drawer back in place
 - Slide it in and out several times
 - Wipe away extra jelly
 - Test movement
 - Clean up any spills

Note: While this method works, I recommend using paraffin wax instead of petroleum jelly for long-term care, as jelly can attract dust over time.
